

# A General Relativity Workbookmathematical Problems Of General Relativity 1

Revised July 1

© 2003 by the author. All rights reserved.

The motivation for the 1988 edition of this workbook, which was originally published by the author in 1975, was to provide a set of problems for students of general relativity. The problems are intended to be worked out by hand and to be used as a guide to the understanding of the theory. The problems are intended to be worked out by hand and to be used as a guide to the understanding of the theory.

## I. Several problems of general relativity

1. The Schwarzschild solution of the Einstein field equations is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by

2. The Schwarzschild solution is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by

3. The Schwarzschild solution is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by

4. The Schwarzschild solution is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by

5. The Schwarzschild solution is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by

6. The Schwarzschild solution is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by

7. The Schwarzschild solution is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by

8. The Schwarzschild solution is a vacuum solution of the Einstein field equations. It is a solution of the Einstein field equations in the region  $r > 2M$ . The metric is given by
